

HOW COMAND BUILDS BETTER SPORTS TURF

APPLIES EASILY

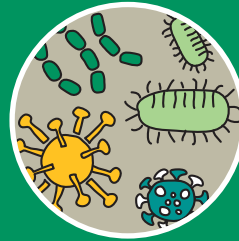

COMAND is applied with a spreader. Benefits are maintained with just one or two application per year.

HARVEST QUEST TECHNOLOGY

COMAND starts with biologically active compost created through the proprietary Harvest Quest method.

DELIVERS BIOLOGICAL POWER

The rich biology of COMAND helps fortify populations of beneficial microbiology for a healthier and more functional soil.

HELPS SUPPRESS NEMATODES

In tests with the University of Florida, COMAND was shown to suppress certain nematodes over a 2-year period.

COMAND WINS!

REDUCES THATCH

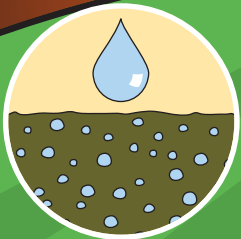

COMAND speeds the conversion of thatch to humus and humic compounds that provide all sorts of practical benefits.

IMPROVES NUTRIENT UPTAKE

Negatively charged ions in COMAND retain nutrients through electrostatic forces, delivering more food to your turf.

OPTIMIZES WATER USAGE

COMAND holds up to six times its weight in water, increasing organic matter, optimizing water usage and reducing run off.

RELIEVES COMPACTION

Using COMAND reduces thatch, and research from Penn State University has shown thatch reduction can reduce athlete injuries.

ENVIRONMENTALLY POSITIVE

By reducing harmful chemical runoff in the environment, COMAND helps restore the natural balance throughout your community.

RESTORES SOIL STRUCTURE

The organic components in COMAND restore important structure to depleted soils, especially those in traditionally sandy environments.
